

## Walk this Way...

The portable roadway experts, TPA are delighted to announce the investment in two additional access and turf protection systems to further enhance their product portfolio. After a rigorous selection process, TPA have chosen two of Terraplas' market leading products terraflor® and terratrak plus®.

terraflor® is designed to shield delicate surfaces such as turfed football and rugby pitches from damage often associated with large crowds of concert goers. Its translucent properties enable light, air and water to pass through the tile meaning that the grass beneath is not adversely affected. terraflor® has a proven track record being used extensively worldwide and is ideal as pedestrian walkway, stadia cover, and marquee flooring. Fast and efficient to deploy, a typical 8,000 sq meter pitch can be laid in 8-10 hours and recovered within 4-5 hours.

Stocks will arrive at TPA's main Worksop depot during July, enabling them to supply the tail end of the summer event season, as well as equipping the marquee industry for the Christmas festivities.

terraflor® and terratrak® being used as pitch protection, U2 concert, Wembley.

terratrak plus®, the culmination of 20 years industry related research and development, is a second generation product used widely by sporting stadiums, and concert promoters as their trusted turf protection system. This unique product can be placed and removed by hand and is capable of supporting weights of up to 150 tonne making it ideal to support cranes and heavy fork lift trucks during concert load- in and load- out.

terraflor® being installed.

TPA's Business Development Director, Amanda Cruyton-Chance commented; "We've listened to feedback from our clients who've remarked that they want the flexibility of partnering with TPA to not only supply heavy duty aluminium but also a plastic system suited as pedestrian walkway, and heavy duty roadway. This investment will not only better place TPA to service our existing clients, but will enable us to reach out to new markets such as concert promoters, film and TV and marquee companies."

Robert Else, Chairman of Terraplas added; "We are delighted that TPA has decided to invest in two of our most popular and widely used products. We

recognise that TPA has an excellent reputation for its quality of service and we know that now it has invested in the "World's No. 1 Turf Protection" products, it will be well positioned to grow this side of its business."

TPA will be demonstrating terraflor®, and terratrak plus® alongside their traditional aluminium access solutions at two Trade Shows, IOG Saltex, Windsor Racecourse, 7-9<sup>th</sup> September and The Showman's Show, Newbury Showground, 20<sup>th</sup> -21<sup>st</sup> October.

TPA supplies to a plethora of the UK's major outdoor events including the Wimbledon Championships, Royal Ascot and the RHS flower shows at Tatton Park and Hampton Court Palace flower show as well as many of the music festivals.
